

MUIZZUDDIN THAQIF BIN RAMLEE

Software Engineer | Integration & Backend Specialist

+60 11-5165 2817 | muizz.thaqif@gmail.com | Cheras, Selangor, Malaysia | linkedin.com/in/muizzuddin-thaqif-ramlee

PROFESSIONAL SUMMARY

Results-driven Software Engineer with hands-on experience in enterprise system integration, Java/Spring Boot backend development, and cloud-native deployment within the banking and financial services sector. Proven track record as a project-side technical owner for cross-border banking integrations — root-causing critical middleware defects, authoring integration standards adopted across engineering teams, and building QA tracking tooling that improves release reliability. Brings strong functional understanding of core banking and lending processes (loan booking, disbursement, EIR and amortisation) alongside deep technical expertise in RESTful API design, message mapping, and database-driven configuration management. Adept at producing comprehensive technical documentation (IDD, TSD) and coordinating across product, architecture, QA, and infrastructure teams to drive end-to-end delivery.

CORE COMPETENCIES

- | | | |
|------------------------------------|---|-------------------------------------|
| • Enterprise System Integration | • API Design & Engineering | • Java & Spring Boot |
| • Microservices Architecture | • Banking & Fintech Systems | • Kafka & Event-Driven Design |
| • Kubernetes & Cloud-Native | • Message Mapping & Data Transformation | • Root Cause Analysis & Debugging |
| • Change & Incident Mgmt (CR/IR) | • Database Schema Design & SQL | • Technical Documentation |
| • Solution & Interface Design | • CI/CD & DevOps Practices | • Cross-Functional Collaboration |
| • Performance & Regression Testing | • Requirements Analysis | • Error/Status-Code Standardization |

TECHNICAL SKILLS

Languages	Java, SQL, JavaScript, PHP, Lua
Backend / APIs	Spring Boot, REST APIs, JSON, DTO Design, API Integration, Microservices
Integration	Enterprise Integration, System-to-System Integration, API Gateway, Interface Design Documents (IDD), Data Mapping, JSON/Fixed-Length/XML Transformation, JRQ/JRS/SRQ/SRS Message Structures, Lookup & Conditional Mapping
Messaging	Apache Kafka, Event-Driven Architecture, Message Queues, Async Processing
Cloud & DevOps	Kubernetes, Helm Charts, Docker, Argo CD, Linux, CI/CD Pipelines, Git, Jenkins
Databases	MySQL, TiDB/MariaDB, Firebase, Liquibase, DDL/Schema Design, Relational DB Design, SQL Querying, Data Validation
Issue & Release Mgmt	Change Requests (CR), Incident Reports (IR), Root-Cause Documentation, Regression & Release Validation, Multi-Environment Promotion (DEV/DEV2/VIT2/SIT/UAT/PROD)
Documentation	IDD, TSD, System Architecture Diagrams, API Specifications, OpenAPI/Swagger
Frontend	Vue.js, React.js, Node.js, HTML, CSS
Tools	Postman, Mockoon, Swagger/OpenAPI, Obsidian, Jira, Confluence, Git/GitLab, DBeaver, Huawei Console

PROFESSIONAL EXPERIENCE

Software Engineer — Project Delivery & Integration	April 2024 – Present
Silverlake Structured Services Sdn Bhd CloudLink.AI	
CloudLink – Affin Bank Core Banking Integration	
- Delivered end-to-end integration support for CloudLink, a middleware platform facilitating message translation and routing between Mobius Core Banking and external/legacy bank systems, ensuring seamless interoperability across channels. - Configured and deployed CloudLink on Kubernetes VM environments, managing Helm chart settings, environment variables, and pod configurations to maintain high availability across development, UAT, and production environments. - Designed and executed test cases covering transaction simulation, edge-case validation, and regression testing; produced test reports measuring TPS, transaction bucket throughput, and timeout thresholds for stakeholder review. - Performed performance testing using in-house tooling, simulating thousands of concurrent transactions to validate system stability under peak load conditions.	

Java / Spring Boot Backend Development

- Applied Java and Spring Boot to design and build backend integration services using Controller–Service–Data Layer architecture, DTO-based request/response models, and dependency injection — exchanging and transforming structured data between internal banking systems and external services.
- Designed and implemented RESTful APIs supporting enterprise banking processes, translating functional requirements into API contracts, business logic, validation rules, and downstream service integrations.
- Performed end-to-end API testing using Postman and Mockoon, validating API contracts, authentication, headers, payload structures, business responses, and downstream integration behaviour.

CloudLink Middleware / Enterprise – Integration and Delivery

- Served as the project-side technical owner for CloudLink integration delivery on the KKP hire-purchase banking project, coordinating with the CloudLink Product Team, Runtime/IO Engine teams, and banking-system stakeholders to deliver configurations, mappings, fixes, enhancements, and production-ready integration solutions.
- Delivered enterprise banking integrations using CloudLink.AI middleware, managing end-to-end configuration through its web-based administration platform — channel/host setup, message-type transformation, mapping maintenance, and lookup/script-function configuration — across JSON, fixed-length, and XML formats connecting Mobius Core Banking with external and legacy systems.
- Owned source-to-target message translation and mapping design between banking-system interfaces and Mobius, including conditional/lookup logic, JSON and fixed-length transformations, date/time conversion, and character-encoding handling.
- Translated business requirements from Bank Solution Architects, Enterprise Architects, system owners, and business stakeholders into integration scope, technical requirements, data flows, interface contracts, and API specifications.
- Built strong functional understanding of hire purchase and lending processes — CIF synchronization/creation, pre-loan-booking validation, loan booking, interest/EIR rate calculation, amortisation, disbursement, repayment, and insurance-related flows — translating business processes directly into technical integration design.
- Designed and supported loan booking and disbursement journeys, including EIR Rate and Amortisation APIs, pre-booking validation flows, and multiple disbursement channels such as cheque, account transfer, and insurance-related disbursements.
- Designed and standardized error-handling and response-translation logic — external errorCode/responseCode lookups, HTTP status-code mapping, downstream failure handling, timeouts, retry/exception behaviour, and partial-success scenarios — to satisfy varying banking-system requirements.
- Authored comprehensive Interface Design Documents (IDDs) — architecture diagrams, API request/response schemas mapping specifications, and integration flows used as the technical reference by development, QA, architecture, and infrastructure teams.
- Drove CloudLink product enhancements and owned CR/IR delivery end-to-end with the Product Team — issue reproduction, root-cause analysis, impact assessment, solution design, implementation coordination, deployment, and fix validation.
- Investigated and resolved complex integration defects including JSONPath/null propagation, mapping conflicts, lookup failures, Lua-based date conversion, header/authorization handling, character encoding, and message transformation issues.
- Worked across TiDB, MariaDB, MySQL, and Liquibase to support integration configuration and environment promotion, resolving schema, DDL, primary-key, and migration issues.
- Diagnosed Kubernetes and middleware infrastructure issues — pod crashes, health-check failures, routing failures, runtime instability, Kafka broker configuration, and version compatibility — using Kubernetes, Docker, Helm, Argo CD, Git, and Linux across environments.
- Coordinated delivery across Project, Product, Runtime, IO Engine, QA, Infrastructure, and Architecture teams, ensuring CloudLink configurations, mappings, middleware components, database changes, and application/runtime versions stayed aligned for each release.

Frontend Developer Intern

September 2023 – February 2024

Nexmind AI

- Developed Text2Social, a Vue.js-powered feature enabling AI-generated social media captions, integrated directly into the NexMind AI SaaS platform and adopted by the production user base.
- Engineered OAuth authentication flows for Facebook, LinkedIn, Instagram, and Twitter APIs, enabling secure token management and direct social posting from the platform.
- Collaborated with backend engineers to design seamless API integrations, contributing to bug resolution and feature stability across the NexMind AI platform.

KEY ACHIEVEMENTS

- **Technical Delivery Ownership:** Served as the project-side technical owner for CloudLink integration delivery on a cross-border KKP hire-purchase banking project, coordinating across Product, Runtime, QA, and Architecture teams to ship production-ready integration solutions.
- **Standardized API Mapping:** Root-caused a critical two-pass mapping-engine defect affecting alternate-path error handling and authored the resulting integration pattern, subsequently adopted as the default implementation standard across inbound API mappings.
- **Delivered Critical Integration Fixes:** Owned and drove resolution of multiple Change Requests (CRs) and Incident Reports (IRs), covering mapping defects, date/time handling, and logging/persistence issues, from root-cause analysis through fix validation.
- **Unblocked Cross-Border Integration:** Investigated a TiDB composite primary-key limitation affecting database design and delivered a compatible schema redesign, enabling a stalled cross-border integration requirement to proceed.
- **Delivered Enterprise Banking Integration:** Supported KKP Bank's hire purchase banking integration, connecting Mobius Core Banking with legacy and external systems through CloudLink middleware for mission-critical financial transaction processing.
- **Established Integration Documentation & QA Visibility:** Authored authoritative Interface Design Documents (IDDs) and built QA/release tracking dashboards covering API test coverage, pass rates, and deployment coordination across five environments.
- **Validated System Performance & Reliability:** Conducted structured performance testing and transaction simulation to establish TPS benchmarks and system reliability metrics for stakeholder validation.

EDUCATION

Bachelor of Software Engineering (Information System Development) (Hons)
Universiti Kebangsaan Malaysia (UKM)
CGPA: 3.47 | Major: Information System Development
Relevant Coursework: Object-Oriented Programming, Data Structures & Algorithms, Software Engineering Principles, Database Management Systems, Web Application Development, Computer Networks, AI & Machine Learning

Sept 2020 – Sept 2023
